

# Zhongshan Huali Industrial Group Co., Ltd

## Packaging Material Policy

### 1. Policy Purpose

In order to practice the concept of green development, reduce the negative impact of packaging on the environment, fulfill corporate social responsibility, and promote sustainable change in the field of footwear packaging, this policy is formulated with the aim of clarifying the company's specific requirements and action measures on green packaging, providing clear guidance and norms for all departments within the company and relevant partners, and helping the low-carbon transformation of the global value chain.

### 2. Scope of Application

This policy applies to the design, production, procurement and transportation of packaging for all footwear products of Huali Group, involving all internal departments and upstream and downstream partners in the supply chain.

### 3. Content of Policy

**3.1 Integration of green packaging concepts into the whole life cycle of products:** Based on the principle of “minimization, reuse and resourcefulness”, the concept of green packaging is integrated into the whole life cycle of footwear products from design, production, sales to disposal. We are committed to building an environmentally friendly packaging system and assisting in the low-carbon transformation of the global value chain.

**3.2 Priority adoption of environmentally-friendly materials:** In the packaging design of footwear products, priority is given to the use of natural, renewable and biodegradable as well as certified environmentally-friendly materials, such as FSC-certified raw materials, so as to realize the recycling of packaging materials and reduce the consumption of natural resources.

**3.3 Lean packaging:** Following the principle of “moderate packaging”, optimize the design of the packaging structure, reduce the overall size of the package, avoid over-packaging and reduce the waste of resources.

**3.4 Elimination of single-use plastics:** Minimize or avoid the use of plastic packaging wherever possible. If plastic bags must be used for packaging, they are made of 100% recycled LDPE (Low Density Polyethylene) to reduce plastic pollution.

**3.5 Promotion of supply chain collaboration:** Actively collaborate with upstream and downstream enterprises in the supply chain to establish a green packaging ecosystem through information sharing, technology exchange and collaborative innovation.

#### **4. Communication and Reporting**

We encourage suppliers, contractors, and stakeholders to monitor policy compliance and report any violations. All reports will be handled confidentially, with zero tolerance for retaliation.
